100% Natural Pain Relief? - Pain Gone Review

Pain can ruin your way of life. Most people have suffered a headache, back pain, or aching muscles but some folks have pain everyday of their lives, such as arthritis. I had been suffering distressing back pain for an extended time, I had tried gel rubs, creams, pain killers etc. Acupuncture did help, but it isn't always easy to get someone to do it if the pain is at its worst. My partner and I wondered about choosing a TENS machine, when I saw [PainGone](#) advertised. I did a touch of internet research and thought we would get one. It came really quickly, and I ripped open the package to examine my new pen. Just like the picture! It's a handy size and I have carried mine about inside my handbag ever since.

I followed the instructions and held PAIN@GONE in my hand with my index finger securely wrapped round the metal ring. Placing the pen over the location of pain, I pressed the red push button 30-40 times. Well In fact I pushed once to give it a try after which plucked up courage to push it 30 times! It did surprise me! It was somewhat of a sharp prick, but no worse than having an injection! Subsequently I have got accustomed to the pricking sensation and it isn't too unpleasant! For those who have needle phobias there isn't anything to worry about as there isn't a needle to be seen.

PAIN@GONE works well on any physical pain for example:

Back pain, arthritis, nausea, headache, shingles, menstruation pain, lumbago, neuralgia, phantom limb pain, sciatica, tennis elbow, fibromyalgia, sports injuries, post operative pain, skeletal pain, whiplash or even travel sickness.

But you ought to know, when treating migraine or headache, it is best to apply stimulation to the opposing side of the body. If the headache or migraine is over the right side of the head- it's best to apply stimulation to the left side of the body.

What have I discovered about this pen?

You'll find specifically developed piezo crystals in the sealed pen component. Once the red button is clicked, the built-in generator generates a high-voltage pulse for an instantaneous moment - this activates PAIN@GONE. The voltage of approximately 15,000 volts (.000006 amps) initiates the pain relief procedure and endorphins are sent to the area which PAIN@GONE is put.

The manufacture of the crystal elements occurs on a dedicated production line and is protected under patent. A diagnostic control test of the high-voltage pulse is handled on one in every hundred units.

The making of PAIN@GONE and the choice of materials - both the plastics for the casing and also the crystal elements - ensure a perfect insulation from the high voltage, and is reduced to a smaller 1-2Hz emitted from the tip of the pen.

PAIN@GONE - Advantages over other Natural Pain Relief Treatments

You don't see any unwanted side effects, as it is a entirely natural treatment, which is simple and easy to use. It's small and long-lasting, yet light enough to fit in to a pocket or handbag. There aren't any attachments to be carried around. Treatment is quick – probably only ½ - 1 minute.

It is simple to do and it is effective through light clothing. It can be used whenever necessary and you simply are unable to overdose. There aren't any batteries, leads, pads or gels to be replaced, and therefore no maintenance is required over the life span of the product which happens to be about 2 to 3 years – or about 100,000 presses.

*** When PAIN@GONE should not be used***

- * If you're fitted with a pacemaker.
- * If you suffer from epilepsy
- * Around the eyes
- * For everybody who is pregnant 16 weeks and under
- * Directly over metallic implants, plates, pins and bolts. This may cause some discomfort, but will likely not actually induce any damage

- * On wet skin or damp environment
- * In close proximity to a supply of oxygen or flammable liquids
- * By children under the age of 8 years

*** Does PainGone Work?? ***

Independent tests show that PAIN@GONE stops or relieves pain quickly in around 87% of the cases on which it is used, rendering it a dependable replacement for medication. Folks have had some pain relief and been able to cut back medication or even avoid it in some instances. I was surprised that my back pain didn't trouble me so much and when I suddenly got another twinge I could click away in safety, without the need to take more medication. I did try it out on headaches too and 1 day when I thought I was going to get a migraine as I had been beginning to feel sick, I was able to go through the clicks and very soon felt a lot better, much to my amazement and satisfaction. Having torn a calf muscle at the beginning of December, I have been in a lot of pain and taking pain killers on a daily basis, since it has improved I have gone onto more exercises but they consequently are causing more pains and aches, so I clicked away on different points on my leg to find out if I would get some relief. Sadly I didn't feel a great deal of difference, but tried doing the same at regular 4 hourly intervals and I haven't suffered the burning pain sensation a whole lot. Pain relief can happen almost immediately in some cases. However some problems may take up to a fortnight of 1 or 2 simple one minute treatments each day before total relief is achieved.

I was telling a friend about this when she was complaining about the arthritis in her fingers, and she admitted she had sent for one, but didn't like the pricking feeling and had not used it again. So it isn't for everybody, and I wouldn't want anyone else to do it on me! Oh heavens I've just realised I must be a masochist!

***Cost ***

I purchased mine from Tower-Health.co.uk for £19.95. I believe Tower Health are the manufacturers of the product, and offers one of the cheapest prices online and will ship all over the world.

*** Would I recommend it? ***

Yes, if you suffer from pains and aches and do not want to take medication then it really is worth trying it out. It can always be utilised by others in the family as it can be used through clothing if hygiene considerations concern you!

You can [Buy PainGone](#) from the official manufacturer like I did rather than potentially paying more through a distributor.
