# Why You Should Use a Bread Maker

A serious rivalry exists between bread made by hand and those made with machine. The general consensus is that homemade bread is better than store bought. So, what do you think? Should you buy a bread maker?

First of all, consider your lifestyle. If you have a lot of time and you can spare a chunk of it into making the bread and then clean up, then maybe a bread maker is not for you. If you have a lot to do at home and you can use the time saved by using the bread machine for cleanup and other chores, you should get a bread machine. In the end, it's how you divide your time. Your skills will also come into play. If your goal is to learn how to make bread from scratch, then you probably should try handmade more often. A bread machine may be necessary if you are a rank amateur and you want to create the best kind of bread possible.

Here are some of the factors that one should consider before buying a bread machine.

#### Ease

There are bread makers that are so easy to use. With good brands like the Zojirushi brand, you just need to combine ingredients and forget about them. The machine is responsible for mixing the dough and making it rise. A timer will show you the state of the bread, and alert you when the bread is cooked. Every feature makes baking easy. Ingredients go in, the machine does all the work, and you just need to wait until the bread is done.

#### Great-Tasting Bread

The process becomes tedious if you do it by hand. Messing up one process means you have to start over. You risk making bread that is too goeey to be edible if you don't knead well. The true test of the dough is whether it will rise or not, but you will have wasted a lot of time and effort before you find out. On the other hand, if you knead too much, your bread will be harder than a rock.
